Connectivity for Industrie 4.0

This catalog shows connectivity that provides complete system-wiring for various applications. Convince yourself of a comprehensive M8x1- and M12x1-portfolio which offers qualitatively high-grade and industry-proven connectivity-solutions for sensor-/actuator-cabling, power-supply, and data-transmission.

Especially in the field of Industrial-Ethernet-connectors you will find numerous product-novelties. These were designed according to high-frequency-aspects and provide huge reserves for a fast and reliable data-transmission for the demands of tomorrow.

In addition, discover the possibilities of our eCatalog. Visit escha.net, download the catalog, and be directly redirected to the detail information by clicking on the item number. Besides this, we provide our catalog in a fast and simple way by offering the widespread BMEcat format. ESCHA data is available in the eCl@ss and ETIM standardized classification system.

Do not hesitate to contact us in case the requested product for your application is not included in this catalog. When it comes to customer-specific modifications or even individual developments, ESCHA is just the right partner for you!

Sensor/Actuator

Automation Line combines typical requirements of automation industry in one product: halogen-, PVC-, and silicone-free; drag-chain adapted; weld-field immune; chemicals-, oil-, microbes-, and hydrolysis resistant. Furthermore tight according to IP67 as well as UL-approved. A comprehensive portfolio with: LED-versions; threaded grip for protective tubing; 360°-shielding through patented ESCHA 2SSK-technology.

Our Food&Beverage connectors in 'Hygienic Design' refer to EHEDG directives. FDA-compliant materials guarantee a high resistance to sour and alkaline cleaning- and disinfectant agents. All M8x1- and M12x1-components are dust- and waterproof as well as protected against water with high pressure and steam-jet cleaning (IP65, IP67, IP68 and IP69). With PVC and PTE we offer the right cable qualities for your application.

Degree of pollution	3	3	3

Due to high-temperature proof materials, our M8x1- and M12x1-connectors guarantee a reliable operating-mode even in extraordinary high-temperature applications. Permanent operating temperatures of -20°C to +150°C and a short term maximum operating temperature of +200°C do not state a problem to this product line.

With our Industrial-Ethernet-components we provide a comprehensive system wiring for various Ethernet applications. Due to a broad range of overmolded and field-wireable connectors, receptacles as well as cable-qualities it is possible to build up a reliable and future-proof system. As usual with ESCHA, the products were designed according to HF-aspects through which the specified data-transmission-properties can be 100 percent guaranteed.

Nomenclature

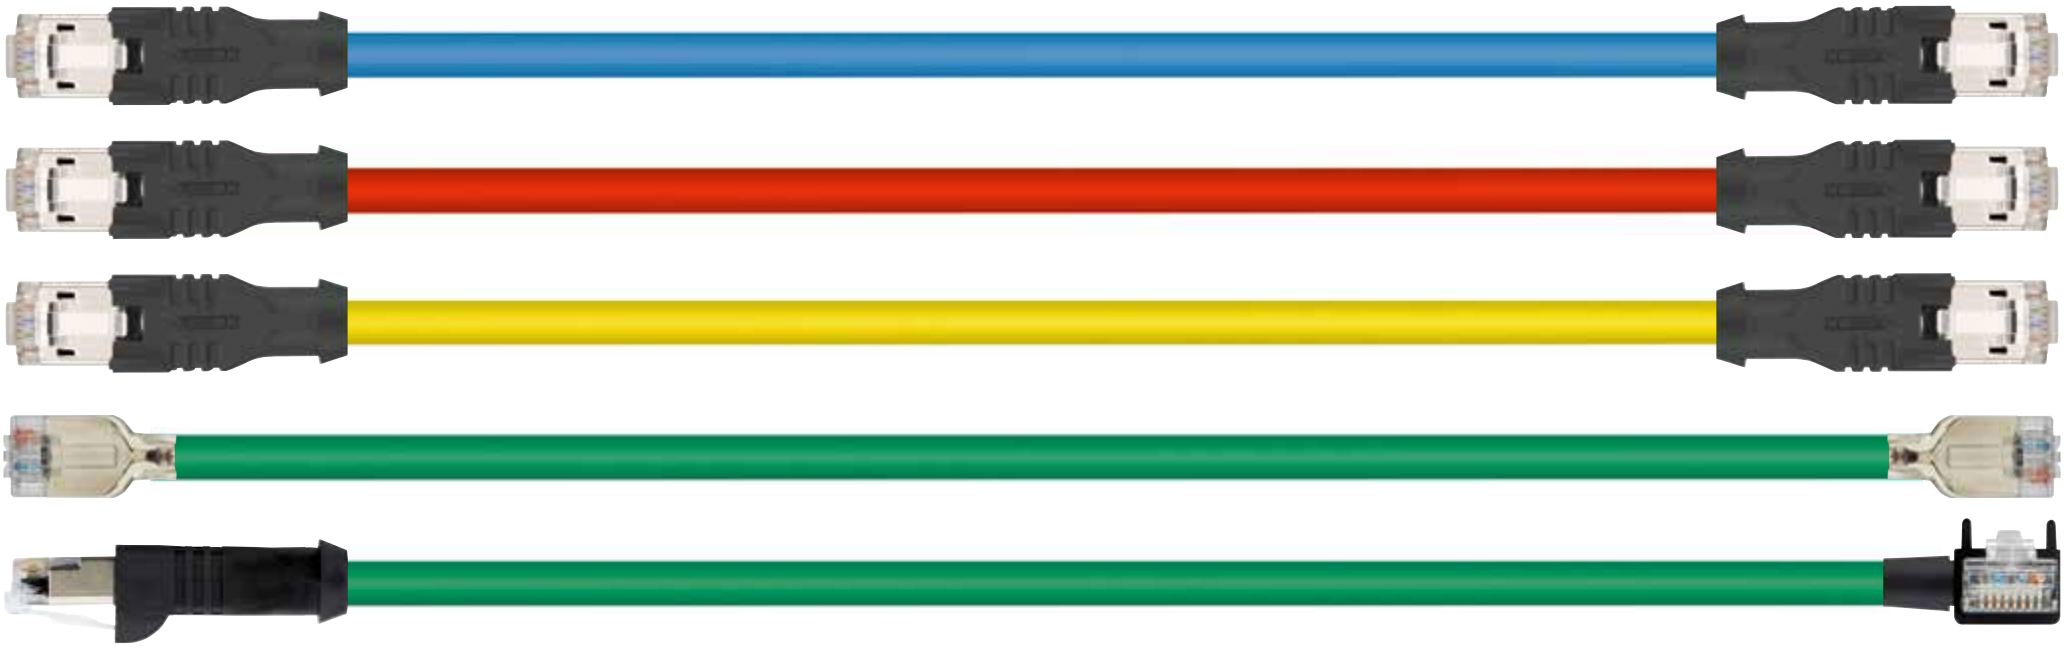

IE–	W0	RJ45	S	S	8.002–	L	– IE–	RJ45	S	S	8.002	/S510	YE

- IE–: Industrial Ethernet
- W0: Without: straight | W: angled | for RJ45: W0=0°, W3=90°, W6=180°, W9=270°
- RJ45: Type RJ45
- S: S: male
- S: Shielded
- 8.002–: Contacts.allocation code
- L: Cable length [m]
- – IE–: Industrial Ethernet
- RJ45: Type RJ45
- S: S: male
- S: Shielded
- 8.002: Contacts.allocation code
- /S510: Cable quality
- YE: Color outer-jacket

suitable for: PROFINET, ETHERNET POWERLINK, EtherNet/IP, EtherCAT, sercos the automation bus, RoHS

Cable	Material	UL	Colour	Transmission features	Drag-chain capability
S510	PUR/PE		GY, RD, YE, BU, GN	Cat5e	
S620	FRNC/PE	✓	GY, RD, YE, BU, GN, BK	Cat7	
S3400	PUR/PE	✓	GN	Cat5e	✓

RJ45 patch cords

Technical data	RJ45
Insulation resistance	≥10^8Ω
Resistance	≤ 5mΩ
Ambient temperature product	-40°C...+70°C
Contact material	Metal, CuZn, gold-plated
Contact-carrier material	Plastic, PC, transparent
Grip body material	Plastic, TPE, BK
Standards	IEC 60603-7-5
Degree of protection (mounted)	IP20
Mechanical life-cycle	>750 mating cycles
Degree of pollution	1

Our RJ45 patch cords are adapted for industrial applications as well as a structured building wiring. We have launched two product lines: one with PVC-cable quality for Cat5e-applications and another with FRNC-cable quality for Cat6A-applications respectively including four-pair AWG26-cables. The RJ45 patch cords are IP20 tested.

The connectors used in fieldbus technology have to meet bus-specific requirements. We have developed a product line which meets the requirements of the PROFIBUS/PROFINET user organization (PNO): 5-pins/B-coded connectors, receptacles, T-splitter and Y-splitter with 360°-shielding.

The ODVA user organization asks for 5-pins M12x1 connectors and receptacles with shielded cables in PUR halogen-free, twisted-pair for signals and supply voltage with stranded drain wire. Of course, our UL-admitted 'thin-cable' components meet these requirements. Furthermore, we offer M12x1 terminating resistors (male and female) with 120Ω.

M12x1 POWER from ESCHA stands for a reliable power transmission via the standardized M12x1-interface. Due to their compact housing design, devices with S-coding (630V, 12A), T-coding (63V, 12A), L-coding (63V, 16A, 4-pole without FE according to PNO guideline), and K-coding (630V, 12A, 4+PE) are especially adapted for the power supply in the automation field. A broad product range with single-ended and double-ended cordsets as well as H-, h-, and T-splitters facilitates a serial wiring structure at field level. The connection cross-section up to 2.5 mm² of all M12x1 POWER products is a unique feature. In contrast to small cross-sections, this feature enables a large extension of power distribution and – especially in case of DC-distribution – a slight voltage drop.

2-way splitters

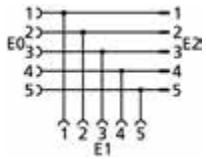

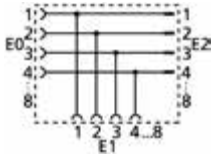

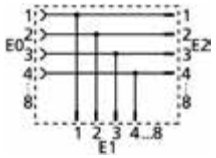

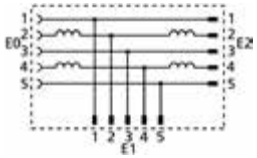

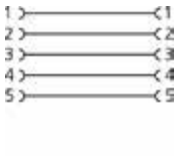

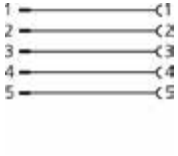

Technical data	Y-splitters	T-splitters	Adapters	Panel feed throughs
Insulation resistance	≥10^8Ω	≥10^8Ω	≥10^8Ω	≥10^8Ω
Ambient temperature product	-30°C...+90°C	-30°C...+90°C	-30°C...+90°C	-25°C...+85°C
Contact material	Metal, gold-plated	Metal, gold-plated	Metal	Metal, gold-plated
Contact-carrier material	Plastic, TPU	Plastic, TPU	Plastic, PA	Plastic
Grip body material	Plastic, TPU	Plastic, TPU	Plastic, TPU	
Sealing (female) material	Plastic, TPU	FPM/FKM	Plastic, TPU	
Standards	IEC 61076-2-101/-104	IEC 61076-2-101		IEC 61076-2-101
Degree of protection (mounted)	IP65, IP67, IP68	IP65, IP67, IP68	IP65, IP67, IP68	IP67
Mechanical life-cycle	>100 mating cycles	>100 mating cycles	>100 mating cycles	>100 mating cycles
Degree of pollution	3	3	3	3 (RJ45:2)

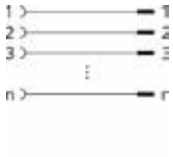

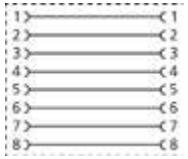

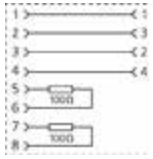

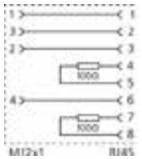

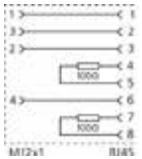

With our Y- and T-splitters you can easily place branches. Signals can be distributed directly with a 2-way junction. The ports (male or female) can be arranged in a variety of configurations, what offers you a high variability and diversity. By request, shielded splitter solutions for communication applications in the field of PROFIBUS and CANopen are available.

Grip body material	Plastic, TPU	Plastic, TPU	Plastic, TPU
Coupling nut material	Metal, nickel-plated	Metal, nickel-plated	
Sealing (female) material	FPM/FKM	FPM/FKM	Plastic, TPU
Standards	IEC 61076-2-101	IEC 61076-2-104	DIN EN 175301-803
Degree of protection (mounted)	IP65, IP67, IP68	IP65, IP67, IP68	IP65, IP67, IP68
Mechanical life-cycle	>100 mating cycles	>100 mating cycles	>100 mating cycles
Degree of pollution	3	3	3

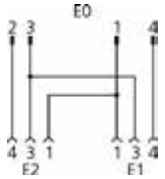

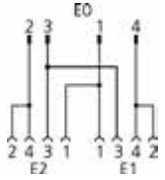

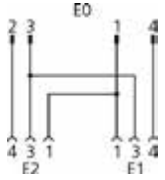

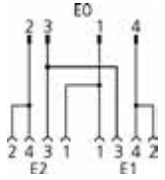

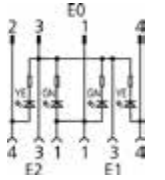

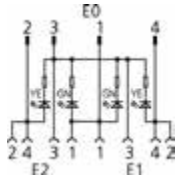

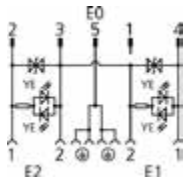

The extremely compact Y-splitters with cable outlet are available in M8x1 and M12x1 housing styles. Male and female connector alignment is customer freely selectable. All standard cables in PUR and PVC for cable outlets are available. The cable outlets can be equipped with M8x1-, M12x1- or valve connectors upon request. As a result of the various options, a high diversity will facilitate product configuration for nearly any application.

M8x1- and M12x1-passive junctions from ESCHA particularly stand out for their compact housing style as well as their flexible fixing possibilities. They are predestined for harsh industrial applications through the proven full potting and a metal thread insert meeting protection classes IP65 and IP67 high requirements. Thanks to different outlets (fixed cable-, top- or front connection) you always find what you are looking for.

Degree of pollution	3

The extremely compact M8x1 I/O-junctions with active logic-function are placing intelligence close to sensors transmitting preprocessed signals to a central control unit. In contrast to conventional passive I/O-junctions or fieldbus junctions they provide the advantage of defaulting to a unshielded 4- or 5-pole sensor cable. In this way, wiring costs as well as wiring time are reduced and wiring errors are averted. The junctions do not have to be programmed by the user due to a predefined logic and can thus be immediately operational. They are especially adapted for grippers, robots or compact handling units.

The overmoulded and field-wireable M23x1 connectors are perfectly adapted to our M12x1-passive junctions. You can choose between 12 and 19 pin versions with different configurations. Due to the ESCHA exclusive cable quality named 'S370', the M23x1 connectors are universally usable in different applications.

Technical data	Valve connector	M12x1
Insulation resistance	≥10^8Ω	≥10^8Ω
Ambient temperature product	-30°C...+90°C	-30°C...+90°C
Contact material	Metal, silver-plated	Metal, gold-plated
Contact-carrier material	Plastic, PA	Plastic, TPU
Grip body material	Plastic, TPU	Plastic, TPU
Sealing (female) material	Plastic, TPU	
Standards	DIN EN 175301-803	IEC 61076-2-101
Degree of protection (mounted)	IP65, IP67, IP68	IP65, IP67, IP68
Mechanical life-cycle	>100 mating cycles	>100 mating cycles
Degree of pollution	3	3

ESCHA valve-connectors stand for minimum installation space and excellent LED visibility in all installation positions at the same time. They are available in typical housing styles and protection circuits. A comprehensive product program with single-ended and double-ended cordsets as well as adapters and double-valve connectors offers a suitable solution for any application.

Comprehensive Information on Connectors

The respective requirements of machinery specifications are binding for the user with connector applications. The relevant standards and specifications according to which our products are made and tested are explained in the following.

DINVDE0627; 2012-03 | Connectors and Connecting Devices

The standard is valid for connectors and connecting devices with rated voltages up to 1000V ~ or 1500V – and rated currents up to 125A per contact intended for connecting assemblies or components in or on machinery or measuring-, instrumentation- or control ciruits considering safety aspects. It is also valid for connectors and connecting devices on household appliances as well as information-processing units.

IEC 60664-1; 2008-01 | Coordination of Isolation

This international standard, which complies with the German standard DINVDE0110-1, April 1997 edition, is a basic safety standard for achieving the coordination of isolation. It contains the required data to determine air distances, creep distances and solid insulations for electrical devices (e.g. connectors). This is realised considering the micro-ambient conditions and other loads they are exposed to in the course of the expected service life. Processes for the voltage test related to the coordination of isolation are included.

IEC60512; May1994 | Measuring- and Testing-Process

This international standard corresponds to the European standard DINEN60512 and has replaced the previous German standard DIN41640. It determines the measuring- and testing-processes for electromechanical components (e.g. connectors). The standard is very comprehensive and consists of 9 sections in total in which all electrical, mechanical and climatic tests are described. In addition, the standard contains tests on soldering ability, density, shielding and cable pull-out support.

IEC60529; 2009-09 | Degrees of Protection by Housing (IP-Code)

This international standard corresponds to the European standard DIN EN 60529 and complies with the German standard DINVDE0470-1, November 1992 edition. It determines the designation, requirements and tests for the classification of protection degrees by housings for electrical devices (e.g. connectors). Thereby, protection against access to dangerous parts, protection against solid foreign bodies and protection against water are evaluated. The degree of protection is designated by an IP-Code.

IEC60068-1; March1995, Environmental Tests

This international standard which complies with the European standard DIN EN 60068-1, contains basic determinations on environmental tests and degree of test-precision. This testing process serves to trace the resistivity of components to expected environmental influences under operating conditions. Typical tests are: coldness, dry and humid heat, shock, vibration, temperature fluctuation and others.

Changes in design are subject to further notice for reasons of quality improvements, refinement or production optimisation. The technical data stated in the cataloge refer to connectors, i.e. components which must not be plugged or unplugged under voltage. In order to secure the correct use of the products, the technical data are listed. It is possible to select the right products using these data. The products are described as well, however the properties are not assured. All ESCHA connectors have been developed and designed for applications in plant-, control and electric device version. It is up to the user to verify the possibility of using the connectors in other application areas as well. Data on properties and sealing refer to torques of 1.0Nm for M12x1-round connectors or 0.6Nm for M8x1-round connectors. All data concerning the IP-degrees of protection are only guaranteed for the connections of ESCHA components.

Characteristic	Standard [1)]	Note
Protection class housing	IEC 60529	Data in plugged condition
Mechanical life cycle	IEC 60512-5/9a	Test is done without electrical load
Rated voltage	IEC 60664-1	The stated value is defined in connection with degree of pollution and overvoltage category
Degree of pollution	IEC 60664-1	
Current load	IEC 60512-3/5b	
Contact resistance	IEC 60512-2/2a	Contact resistance contact-pin/contact-bush in plugged condition throughout a defined range
Insulation resistance	IEC 60512-2/3a	Insulation between two conducting parts (dependent on material)

Supplementary Technical Data

[1)] The technical data represent initial values which can change depending on load. The housings have to be included in the device protective-measures when mounting electrically conductive receptacle housings. The cables to be connected should be insulated in such a way that the distances to electrically conductive parts are not reduced. When soldering the cables, care must be taken that none of the single wires is projecting which can cause short circuits.

	Digit 1	Digit 2
0	Unprotected	Unprotected
1	Protected against access to dangerous parts by hand pressure. Protected against solid foreign bodies Ø50mm.	Protected against dripping water
2	Protected against access to dangerous parts by fingers. Protected against solid foreign bodies Ø12.5mm.	Protected against dripping water when housing is inclined up to 15°
3	Protected against access to dangerous parts by a tool. Protected solid foreign bodies Ø2.5mm.	Protected against spraying water
4	Protected against access to dangerous parts by a wire. Protected against solid foreign bodies Ø1mm.	Protected against sprinkling water
5	Protected against access to dangerous parts by a wire. Protected against dust.	Protected against water-jet
6	Protected against access to dangerous parts by wire. Protected against dust.	Protected against a strong water-jet
7		Protected against effects due to temporary immersion in water
8		Protected against effects due to permanent immersion in water. (Conditions to be agreed upon between manufacturer and user. However, conditions must be more difficult than with IP_7)
9		Protected against water by high-pressure steam-jet cleaning

Degrees of Protection | IP: International Protection

For reasons of safety, connectors must be protected against environmental influences, e.g. dust, foreign bodies, touch, humidity and water. In case of industrial connectors, this protection must be provided for by the housing and its locking as well as the insulation on cable outlet.

The degrees of protection are indicated by an abbreviation consisting of two constant characteristic letters IP (International Protection) and two following digits for the protection degree. The first digit indicates the protection degree against touch and foreign bodies. The second digit indicates the protection against damaging ingress of water. All data are only valid in locked condition. Awarding degrees of protection is subject to a standardised testing procedure.

Rated voltage

Specifies the maximum electrical voltage during standard operation. Operating properties of round connectors are related to rated voltage.

Insulation resistance

The insulating capacity of a material is defined as separating adjacent contacts or a contact against ground at a high-impedance as possible according to IEC 60512-2, 3a and DIN EN 60512-2.

Current load

According to DIN ISO 60512-3, the current load of a round connector defines the maximum permissible current permanently and concurrently flowing through all contacts at an ambient temperature of 40°C. The total current-related self-heating and ambient temperature must not exceed the maximum limit temperature of a round connector – defined by the thermal properties of the materials used. The so called derating-curve illustrates the relation between the current load of a round connector and its ambient temperature. In practice, possibly higher currents per contact are permissible as not all contacts are permanently energized at a maximum rate. Exact values are to be individually determined by testing.

Isolation coordination (air- and creepage distance)

For electrical equipment in low-voltage installations (<1kV), DINEN60664 (DINVDE0110) describes the process of measuring the isolating air- and creepage distance. It defines minimum air distances (minimum distances between voltage carrying parts in the air) and minimum creepage distances (minimum distance between voltage carrying parts along an isolating surface) to avoid an electrical flashover. Minimum creepage distances depend on isolating material and degree of pollution.

Degree of pollution

The degree of pollution (1-4) defines the quantity of pollution (solid, liquid or gaseous impurities), at which the dielectric strength and/or surface resistance are reduced. For industrial applications, a degree of pollution 3 is typical: conductive or dry, non-conductive pollution occurs. The latter can become conductive through the expected thawing.

Mechanical life cycle

Defines the number of mating cycles (a mechanical connect- and disconnect process of a round connector), during which no abrasion of contact surfaces occurs and thus increasing contact resistance.

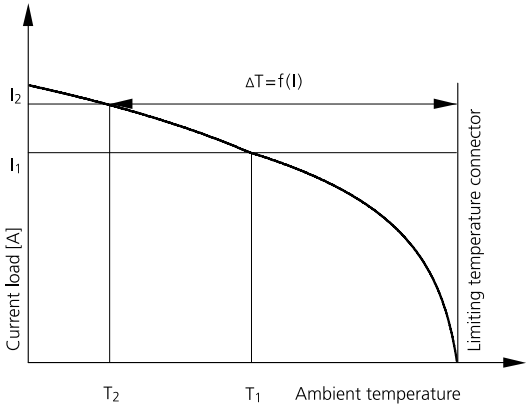

Fig 1. Derating-curve

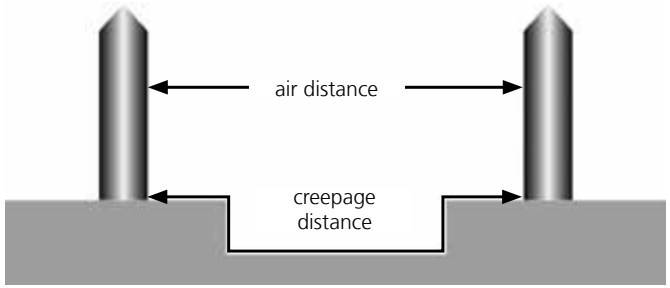

Fig 2. Isolation coordination

AWG	Wire structure [mm]	Wire diameter [mm]	Wire cross-section [mm²]
30	1 x 0.25 | 7 x 0.10	0.25 | 0.36	0.05 | 0.06
28	1 x 0.32 | 7 x 0.13	0.32 | 0.38	0.08 | 0.09
26	1 x 0.4 | 7 x 1.16 | 19 x 0.10	0.40 | 0.48 | 0.51	0.13 | 0.14 | 0.15
24	1 x 0.51 | 17 x 0.20 | 19 x 0.13	0.51 | 0.61 | 0.64	0.21 | 0.22 | 0.25
22	1 x 0.64 | 7 x 0.25 | 19 x 0.16	0.64 | 0.76 | 0.81	0.33 | 0.34 | 0.38
20	1 x 0.81 | 7 x 0.32 | 19 x 0.20	0.81 | 0.97 | 1.02	0.52 | 0.56 | 0.60
18	1 x 1.02 | 19 x 0.25	1.02 | 1.27	0.82 | 0.93
16	19 x 0.29	1.44	1.25
14	19 x 0.36	1.80	1.93
12	19 x 0.46	2.29	3.16
10	37 x 0.40	3.10	4.65

Conversion of American Wire Gauge, AWG in mm²

In some industrial areas, the American Wire Gauge is also used for cables. The following table serves the conversion from AWG in mm². It should be taken into consideration that wires with the same AWG-number but different structures show slightly different cross sections.

Pg	Metric thread	max.Wrench width [mm]	max.Corner length [mm]
Pg7	M10x1.5 | M12x1.5	16	18
Pg9 | Pg11	M16x1.5	21	23
Pg13.5	M20x1.5	25	28

Overview Pg-thread vs. metric thread
(wrench width for cable screwing according to EN50262)

The interim period for DIN46320 "screwing for cables and conducting lines with Pg-thread" expired on 31 December 1999. Since then, screwing for cables and conducting lines had to comply with the national standard 46319 before this was replaced by EN50262 on 1 March 2001.

CERTIFICATIONS

UL (Underwriter Laboratories Inc.)

The certification of products, components or materials by the Underwriter Laboratories Inc. is the verified proof that it meets the specific safety requirements. UL-approvals are, above all, required for the American and Canadian market.

For relevant ESCHA products, component approvals (UL Recognized Component) apply, qualifying them as UL-approved components for installation into UL-approved systems. This component approval also holds for relevantly used cable qualities. Single cable qualities (see Standard Cable qualities table) carry the UL-Listing-certification mark (device approval), which guarantees compliance with the valid UL-safety standards.

ECOLAB

ECOLAB supplies special detergents and disinfectants for the food processing industry. In the past, the company has offered ECOLAB-resistance tests to component manufacturers. Meanwhile, component suppliers have been provided with detergents for field tests. ESCHA is currently carrying out similar tests according to ECOLAB specifications in its own test lab.

FDA

The Food and Drug Administration (FDA) is a state-controlled, US-American agency in charge of food control and drugs approvals. It defines materials for food production that cause no interactions in the processing procedure. ESCHA exclusively uses FDA-approved materials for its Hygienic Design product line.

Guideline 2011/65/EU (RoHS - Restriction of [the use of certain] Hazardous Substances)

The EU-Guideline restricting the use of certain hazardous substances in electrical- and electronic devices does not allow hazardous substances in devices and components above defined limits. Lead, cadmium, mercury, hexavalent chromium, polybrominated biphenyls (PBB), and polybrominated diphenyl (PBDE) are among the hazardous substances. For ESCHA products, this means lead-free soldering and no use of flame retardants in plastics and cables.

Guideline SJ/T 11364-2014 (China RoHS Standard)

For ESCHA items, compliance with the guidelines is established with EUP-Label (Environmentally friendly Use Period). Permissible residues of hazardous substances in the product according to RoHS guidelines are chemically ligated in such a way that the do not escape in a period of 50 years (number in EUP-Label) under normal environmental conditions.

GOST-R (ГОСТ - Государственный Стандарт)

Importing goods into the Russian Federation requires the certification by the Federal Agency for Technical Regulation and Metrology which verifies product compliance with the Russian requirements, standards and quality standards.

CE-Designation

The CE-Designation indicates the conformity of a product with harmonized EU standard and therein defined requirements.

Directive 2012/19/EU on Waste Electrical and Electronic Equipment

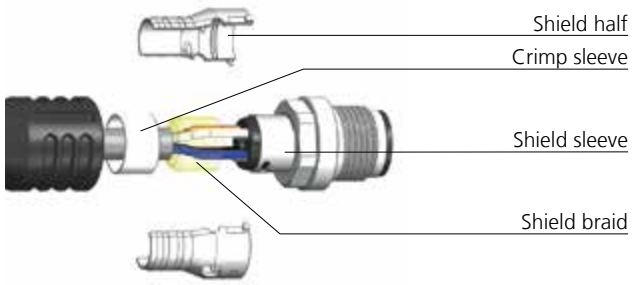

The WEEE-Directive 2012/19/EU (Waste Electrical and Electronic Equipment) serves to avoid wastes of Electrical- and Electronic devices and the reduction of such wastes through recycling and other forms of further processing. It specifies minimum standards for handling Waste Electrical and Electronic Equipment in the EU.

Shielding | ESCHA two-component overmould shielding (ESCHA 2SSK)

EMC of devices has gained more significance since the publication of the law on electromagnetic compatibility.
The devices have to be made in such a way that:

- The generation of electromagnetic interferences is limited to the extent that a proper operation of these devices is possible.
- The devices have an adequate stability against electromagnetic interferences in order that a proper operation is possible.

The ESCHA two-shell-shielding concept comprises an equipotential surface through two interconnected metal shells encapsulating the round connector at 360°. The shield braid of the molded cable is crimped all around on the shield sleeve. A twofold-overmold provides for 360°-shielding even at high mechanical stresses, dust- and waterproof at high pressure- and steam jet cleaning according to IP67 and IP69.

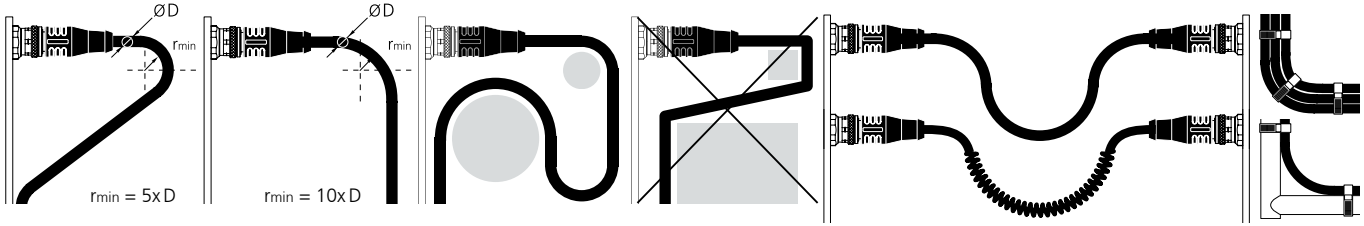

Wiring instructions

The correct installation of the round connector and a professional wiring are the precondition for properties of a relevantly tight and reliable electrical connection guaranteed by the manufacturer. In order to avoid damage to a round connector and cable, the minimum bending radius of the cable (r_{min}) is to be observed during the wiring.

Data lines are high-performance products. Avoid any mechanical influences like squeezing, edgy snapping and tractive forces during mounting and operating to ensure a permanent and safe data transmission. Be careful while mounting at sub-zero temperatures, as plastics boast different features at low temperatures and the end product might be damaged. When using cable ties for cable bundling or permanent wiring, the ties must not cut into or deform the cable to avoid short circuits, cable interruptions or a reduction of the dielectric strength.

In case of double-ended cordsets, sufficient cable length between the connections should be observed in order to absorb the generated energy during movement. The use of cable loops, spiral lines or cable chains guarantees a high life cycle of the round connector system.

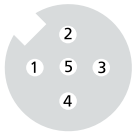

Recommended tightening torque

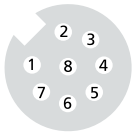

The use of a torque application tool is recommended for tightening and loosening of round connectors. The recommendations base on internal tests and cover a majority of applications and product combinations. Due to the design variety of products available on the market, specifications have to be checked in individual cases.

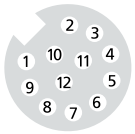

Recommended tightening torque according to IEC 61076-2 test requirements		
Round connectors	M12x1	1.0 Nm
	M8x1	0.6 Nm
Receptacles	M12x1	2.0 Nm
	M8x1	1.5 Nm
Valve connectors	VA	1.0 Nm
	VB | VBI	1.0 Nm
	VC | VCI	0.6 Nm
